Education

University of Waterloo

Sep 2021 - Apr 2025 (Anticipated)

Honours Bachelor of Computer Science; cGPA: 95.10%

- Coursework: Operating Systems, Algorithms, Data Structures, Object Oriented Programming, Statistics, Linear Algebra, Combinatorics
- o Scholarships: Faculty of Mathematics Scholarship, President's Scholarship of Distinction

Skills

- Languages: C, C++, Python, Java, Scala, Bash, Rust, JavaScript, TypeScript
- Tools/Platforms: Linux, Docker, Nginx, DPDK, Django, Flask, Node, Express, Google Cloud Platform

Experience

• Huawei - Network Engineering Intern

May 2023 - Present

Engineering protocols and libraries for high-throughput, low-latency networks (C, DPDK)

- Created library using Dataplane Development Kit (DPDK) to process UDP packets, with up to 18x speed improvement over Linux kernel
- Collaborated to design a connectionless but reliable transport protocol applicable in high-performance scenarios
- Designed and implemented library for the protocol in C, employing concurrent data structures and message passing to achieve processing of 150+ simultaneous connections on a single machine
- Developed logging software to track and troubleshoot performance with minimal (<<1%) impact on runtime
- o Used tools such as gprof, gdb, and tcpdump to resolve complex performance, networking, and concurrency issues

AMD – Software Engineering Intern

May 2022 – Aug 2022

Developed and maintained debugger for 200+ Kernel-Mode Driver developers across AMD (C++, Python)

- o Added feature to inspect hardware scheduled queues, enabling debugging of critical launch-gating issues
- Proposed and implemented improvements used across unit (GTest, GMock) and CI test infrastructure, reducing test code size by up to 50%
- o Automated formatting of tables, nested lists, and dictionaries, ensuring consistent output and deduplication of code

• WePlate O – Backend Engineer

Jan 2022 - Jun 2022

Designed, developed, and deployed backend system for nutritional insights (Python, Django)

- o Processed and served 10,000+ cafeteria scheduling and nutritional items using Django REST Framework
- o Implemented Simulated Annealing algorithm to autogenerate portion sizes optimized for nutritional value
- Deployed project as scalable webservice using GCP AppEngine and CloudSQL

Awards/Competitions

- ICPC ECNA Regionals: Represented Waterloo in 2021 and 2022, placing 4th and 6th against 90+ other university teams
- Putnam 2021: Placed in the top 500 of the most famous University-level mathematics competition
- USACO Open 2021 (Platinum): 32nd of pre-college contestants in the highest division of the USA computing olympiad
- Google Code Jam 2021: 3rd of Canadian contestants in international algorithms competition with 90,000+ contestants
- CCC & CCO 2021: 1st out of 2,900+ contestants at Canada's most prestigious high school programming contest (CCC), qualifying for the CCO (top ~40 CCC) and achieving a silver medal

Projects

- C++ Game Engine: Designed and implemented object-oriented (OOP) game engine built around the MVC pattern. The engine supports handling a variety of entities with built in entity movement, collision detection, and a graphics library
- Competitive Programming Tools (?) (Tools that greatly speed up implementation and debugging during programming contests. Includes automated local testing, stress testing, and browser integration. Available as a Python CLI or VSCode extension (TypeScript and React.JS)
- LACS Compiler: Scala-based compiler for functional language targeting MIPS. Includes support for closures, nested functions, static typing, garbage collection, and tail-call optimization
- Minecraft Server Plugins: Used Java, Kotlin, and the Spigot API to add features such as KitPVP mechanics, custom bosses, and hats
